Case Study

José has come to the Career Center to receive assistance with finding employment. José served in the U.S. Army infantry for 6 years experiencing several deployments to Afghanistan and Iraq.

José is also about to graduate with an associates degree in business administration from an online college. He indicates a strong desire to work in the field of human resources in a position that allows him to make a good living and move up in the organization fairly quickly.

José is unclear of specific options as well as ways in which he can translate his military experience to civilian employment opportunities. José also exhibited some anxiety about his progress.

Use the information from the case study to fill out the Pyramid of Information Processing.

Where is Jose in the CASVE cycle?

How would knowing this information influence your work with him?
